

Galvabrite Cold Galvanizing Compound

Description

Galvabrite Cold Galvanizing Compound is the best long term zinc rich coating that protects iron and steel surfaces exposed atmospheric or corrosive conditions from rust and corrosion. It contains 95% zinc in very fine particles which gives metal surfaces is full galvanized protection without expense and inconvenience of hot dipping. If the coated surface is scratched, an electrochemical reaction causes the zinc to sacrifice itself for the best metal's protection. This keeps corrosion off the protected surface.

Operational Benefit

- * Longest-term rust preventive
- * Stop rust in all climate conditions
- * Easy to apply, can be brushed, sprayed or dipped. No skilled labour is required
- * Equal to hot dip galvanizing

Applications

Suggestions for application include welded joints, guardrails, bridges, damaged surfaces, fences, heat duct, storage tanks, pipe lines and offshore equipments.

Directions

Surface to be treated must be totally free from rust, dust, oil etc. If necessary sandblast or clean with sand paper. Apply Galvabrite Cold Galvanizing Compound for incomparable corrosion Protection.

Must not be mixed with conventional soap based greases
